CAMGUARD

ADVANTAGES

- Allows on-line filter replacement of earlier stages
- Guard filter in combination with a high velocity bag filter
- Suitable for high velocity applications

Suitable for all environments including high velocity air inlet systems. Typical for coastal and offshore installations Pre-filter for gas turbines, large industrial air compressors, diesel & gas engines, generators & enclosures			
Stainless steel			
Flat gasket			
Synthetic			
250 Pa			
70°C			
100%			
Additional information: Designed for use in combination with Cam- Flo GT HV.			

The CamGuard is a coarse filter that is installed downstream of the Cam-Flo GTX7, allowing online filter replacement thus reducing costly downtime.
